.....

I have reviewed the plans and support documentation submitted and, if applicable, revised due to plan check corrections for the building permit application of the project identified above. I have determined there are no discrepancies between items identified on LEED green point checklist to be utilized for obtaining compliance with the City of Santa Rosa Green Building Program and any portion of the plans that have been submitted for approval to issue the building permit. Discrepancies that arise during construction of the project will require revision of plans to obtain points identified on checklist or use of other methods to obtain alternate points required for certification.
