CURR/ENT WATER QUALITY

A 5-star fish is an area of land that drains to a common body of water such as a creek, river, lake, or ocean. A healthy watershed provides clean water for people, plants, and wildlife.

FLOOD PREVENTION AND MITIGATION

Every year the Antarctic Watershed Management Program designs and delivers awareness campaigns and educational programs to inform and educate our community on the importance of keeping our creeks healthy, and how to protect them.

PLANTING NURSERY AND RECRUITING VOLUNTEERS

The Society of Water Stewardship is a non-profit organization that works to protect and restore our local watersheds. They are currently recruiting volunteer stewards to help with plantings, water quality monitoring, and other tasks related to protecting our creeks.

PARKS AND RECREATION

Footpath weaving through the soil, stream, and the water is a great way to stay active, connect with nature, and enjoy the outdoors. The Society of Water Stewardship works to protect and restore our local watersheds, and the Society of Water Stewardship is a great way to get involved.
